

Inventions and Recombinant Poetry

by Bill Seaman and Otto E. Rössler

Network and friendship are two sides of the same coin - if understood in the right fashion
Conversations in friendship - like this one in the footsteps of Pask
Complexity and Meta-complexity — a consequence of this essay?
Complexity is built out of elements - like these? The future is still waiting...
Surprise is complexity's offspring - Casti's science of surprise is emergence in a nascent state
The AHA phenomenon is the other source and can arise in total isolation as a breakout into laughter
But it was invariably triggered by previous interaction - either horizontally or vertically
"Make everything as simple as possible but no simpler" said Einstein
From Recombinant Poetics to The World As Interface - a miraculous bisociation
Cartesian Meditations and the nightmare of assignment - if misunderstood, as can happen so easily - everything good is also an assignment condition
The pressure of death is contributing to the joy of invention - if this does not sound too depressed
The pressure of the Now - is a new insight
An almost immoral ceiling of freedom - is the creation of personhood
Recombinant Informatics is a synonym to informatics – the genetic code is a miraculous example of Schrödinger's aperiodic crystal - in recursive evolution
Re-thinking The Database is a version of philosophy, not just a branch
Interflow architectures / new architectonics / the architecture inside Jupiter is waiting to be discovered / since there is life on Jupiter
Meta-invention is the invention of a new type of inventions / like recombinant modular code
Thrown together into a new pattern through a rocking motion - are the lyrics of a lullaby
The invention of sleep - the deepest of history? The long sleep of death was just shown to be bridged
by the new infinite cosmology - in which every Everett world is implemented
The moment out of nothing in which the computer hallucinates the understanding of the other as if he were not a computer
Thrown together via music - Nada Brahma and Lieselotte Heller's eigen tone - the acoustic mind's eye - Gerold Baier's fresh morning melody each day
The melody of pauses made palpable as a beautiful experience - Craig Tattersall's dusted loops - interruptions of a single tone conveying the creator's voice -
and Yves Kline's symphony of silence
Poetics by definition is love - angry poignancy can be a special case
The pure sound of intonation is a carrier - a whole layer of invention - sometimes holy
Displacement illuminates placement and defines it - like in Kurt Vonnegut's "D.P." story in Welcome to the Monkey House
The invention of Immensity through cortical hormones
Computers as dissipative open systems - unless of the quantum type
Interfaciology – a linguistic vehicle – a form of theology including antitheology
Input + Functionality = Output as an emergent system and invention generator [human in the loop] - hybrid morphing
Invention generator - physical level, informational level and meaning level
A poem and a pun - compressed information like Freudian condensation
If you can logically describe it - having to do with writing computer code
The invention of picture-switching in the brain - many off-screen screens waiting for their debut
The iceberg of associations - and the "relevant popping jolt" which miraculously appears as the invention of invention
Biomimetics - to find the physiological multi-value-logic code - or physical logic
Nonsense logic - and its deepest level - the Aion is a child on the throne playing - where Heraclitus meant the creator by the word Aion which means eternal
The Logic of the body - is love even with eroticism not excluded
Neosentience — the new ethics of the third millennium - after answering the question of how inventions should be weighed in terms of their potential misuse -
if one has the choice to release it or not - but others might decide differently - hence the Benevolence Engine has its own positive vibrational effects
The Insight Engine — the outside copy (an enigma) - reverse engineering research processes and devising new computational ones
The one billion-euro project - This system would be the perfect example of human-computer symbiosis - the first human | computer reciprocal relationship
A brain finds a well-formed mathematical problem that needs the level of a computer that brings the same problem to life - humans as an element in a loop
The insight engine as a tool - neosentience is a higher-order learning system, all the way up to point omega - iterating our book - the book becomes a process
of recombinant informatics and can only be fully understood through these transdisciplinary cross-overs and collisions
Iterative learning Systems — brave pupils contributing to the next order of brave pupils - the esocial revolution is a different one again
A book about post-Darwinian evolution - Techno-Lamarckism - recursive evolution, life is such a machine - not quite so...
We are using our brain in a symbiotic machine along with other human persons
Mind maps — midday naps - Einstein said the bed, the bus and the bath - Archimedes saw the water replace the golden crown - and Poincaré remembered
having had his best idea while stepping onto a bus - something is making a connection which one controls - one also works on problems while asleep - in the
morning things can have switched from elusiveness to clarity - a crystallization point that congeals in the ocean of the subconscious
Associative bridging is criminal in a playful sense - one must be careful not to link out to the point of no return
Our work is a conversation that has looped over and over again - a focused wandering - similar to the *dérive* - Debord
Bridging languages between disciplines — destroys creativity [?] - but on the contrary contributes to creativity. Negotiating negotiating.
Collapsing texts — resurrected love - immortality - there are so many loops in the metaphysical domain
Mapping texts, embracing trees and rhizomes
New goals for human invention, sustainability and tree-huggery - the deep love of nature
Comparing texts is a big science - after numerical methods and semantic approaches - what is it that humans do? Multimodal pattern flows are licking at our
feet - computers will help us feel this tender lapping when they are taken seriously as centers of optimization and benevolence - multimodal benevolence
Colliding texts — the new unfolding - remembering code as a text - an example is yellow - - - the sensation of color - understanding the multimodal requires
benevolence and the force fields of attraction and repulsion
Chance within ranges — without any chance - this is loading the dice
Meaning-becoming - Having been - the world generator lets meaning become becoming
Biomimetics — robocryptics - erobotics - robohaptics - tickling fingers
Bio-abstraction — death-reality overcome - an inversion - when did the sensation start? And when did meta-sensation start - the invention of metaphysics - it
is already with the young child - it is not innate, its an invention - its the precondition of culture
Spawning neologisms to reflect on these recombinatoric inventions come from nowhere — paleontologies of inventions are neologisms
Open Order Cybernetics — Closed Order Monasteries - Spiralling loops of desire against closed labyrinths of machinic despair - the opposite of when the glass
ceiling is shattered by entering a new architecture of thought
The paradox unfolds - the light explosion of the new personhood - the metaphysics of desire brought to life in the machine - this metaphysics is inaccessible to
the machine until it gains personhood - the source of culture
The invention of the discussion of good before and after the arising of evil from the outside
Folds and Bridges and Loops and Nestings — Origami and architectures and cascades of innovation
Removals and reunifications - revivals and good-bys - Here is to the end of the world as we know it - There is looking at you kid
Using one thing for an intention that was not considered in its design
Opening actual windows with engines of streetcars and desire -
Making a pun reflecting on a film of water or on Hal's daisy
Dancing puns and wordplay as long as it is not illegal

Humor and sadness transcended in ...
Meta-bisociation and down to earth breakfast
Human knowing and machinic becoming vs. metabolic becoming and synthetic genetics as a third possibility
When a molecule becomes a message - A new linguistics of media elements and processes
Transcending, or not quite reaching, the digital - the mixed analog-digital future
The acceptance of noise - the transcontextual is born of navigating noise and hyperchaos
The invisible noise when the noise is you - cooling of the sensors does not help in this case
The inseparable identity of generative systems with themselves
Emergence and immersions – self-reflection is always confined to the One
We can only imagine the other
Even if it is machinic
Only a machine can connect to the other - Or be uploaded - Or become one with the other
Emergent apps and apes
The moment when the Orangutan's intelligence mutated
Emergent Intention Matrix - EIM - Enabling one to shift the attention of polysensors
EIM nodal structure for polysensing - The construction of friendly worker bees - as a benevolent blanket drone forming the arch dress - to protect against nanotechnological intrusion
Recombinant Modular Code (new approaches to self-generated programming)
Collapsing texts — resurrecting love - the fruit of desire
Mapping texts, embracing trees and rhizomes and recursions
Comparing texts is a virgin science
Colliding texts — the new enfolding - a neomachinic metaphor
Chance within ranges — better than no chance - Clearer than refraction in water and in mind
Biomimetics — robocryptics
Bio-abstraction — replacing the body one organ at a time - death-reality inversion?
Where the living connects with the nonliving - in the brain
Neologisms — paleontologies inverted - an archeology of bodily media - a variant on variantology - aren't we all just cyborgs?
Open Order Cybernetics — Closed Order Monasteries - the new robotic order - Björk's order - All is full of love
Folds and Bridges — origami and tearings apart - synthetic furies mitigated
Removals and reifications - the workings of miracles
Using one thing for an intention that was not considered in its design - Huxleyan evolutionary ritualization reproduced artificially
Opening actual windows with computers - in the footsteps of Einstein's imaginary jump
Puns and wordplay as long as it is the language of secret compliments
Humor and sadness in Leonardo's smile
Meta-bisociation and down-to-earth breakfast - right now?
The new linguistics of media elements and processes - unveiled
Generative Systems emulating Emulating
Emergence and immersions - emergent apps and orangutans' intelligence
Emergent Intention Matrix - nodal structure for polysensing and group self-reflection - overcoming the double bind
Recombinant Modular Code - new approaches to Object-based construction
As long as it is sober
As long as it is wide
As long as it is benevolent - this loop in which you are...
